## **Fitting the rack:- Specific notes about your kit**

Firstly remove the indicators as these will be moved onto the rack. Fit the Z brackets (P413) into the circular discs at the front of the rack - the other end will attach to the top shock absorber mounts. Attach the long support arms (P128 and P254) remembering these are handed, to the pillion footrest bolts and the top of the ski on the rack. They should be fitted to bend outwards. Two straight support arms are included for extra support.

When you are happy with the position of the rack, tighten up all the nuts.

Refit the indicators to the angled bracket on the luggage rack, see fig 1.

**Fitting luggage** :- See 'General Fitting instructions' for step-by-step advice for fitting a rack and panniers to any machine.
